Hope Brook Gold Project – Regional Prospects

Phillips Brook

- Tested by 8 diamond drill holes over a 2.2km strike length. Last drilled in 1996 by Royal Oak.

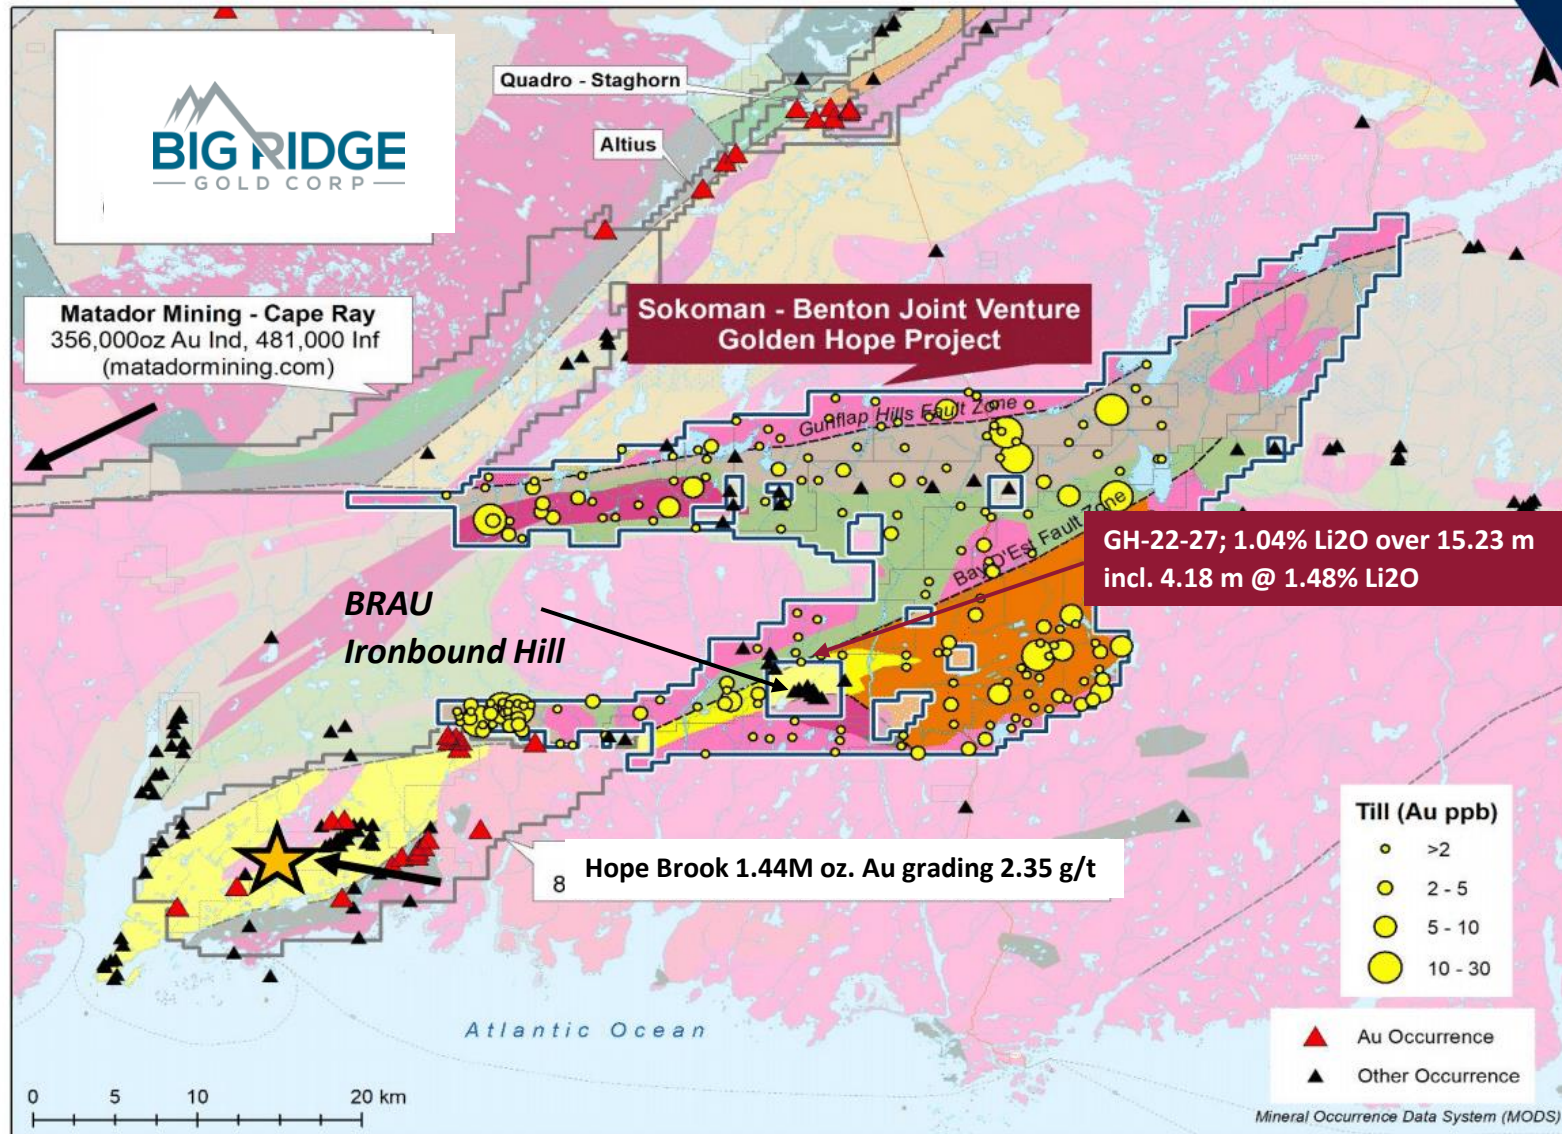

Cross Gulch

- Tested by 10 diamond drill holes that defined two sub-parallel gold bearing zones across 225 meters of strike and to 100 meters of depth.

Old Mans Pond

- Trenching returned 168 g/t Au over 0.80 meters.

Hope Brook Lithium Potential

Bay D'est Fault (BDF)

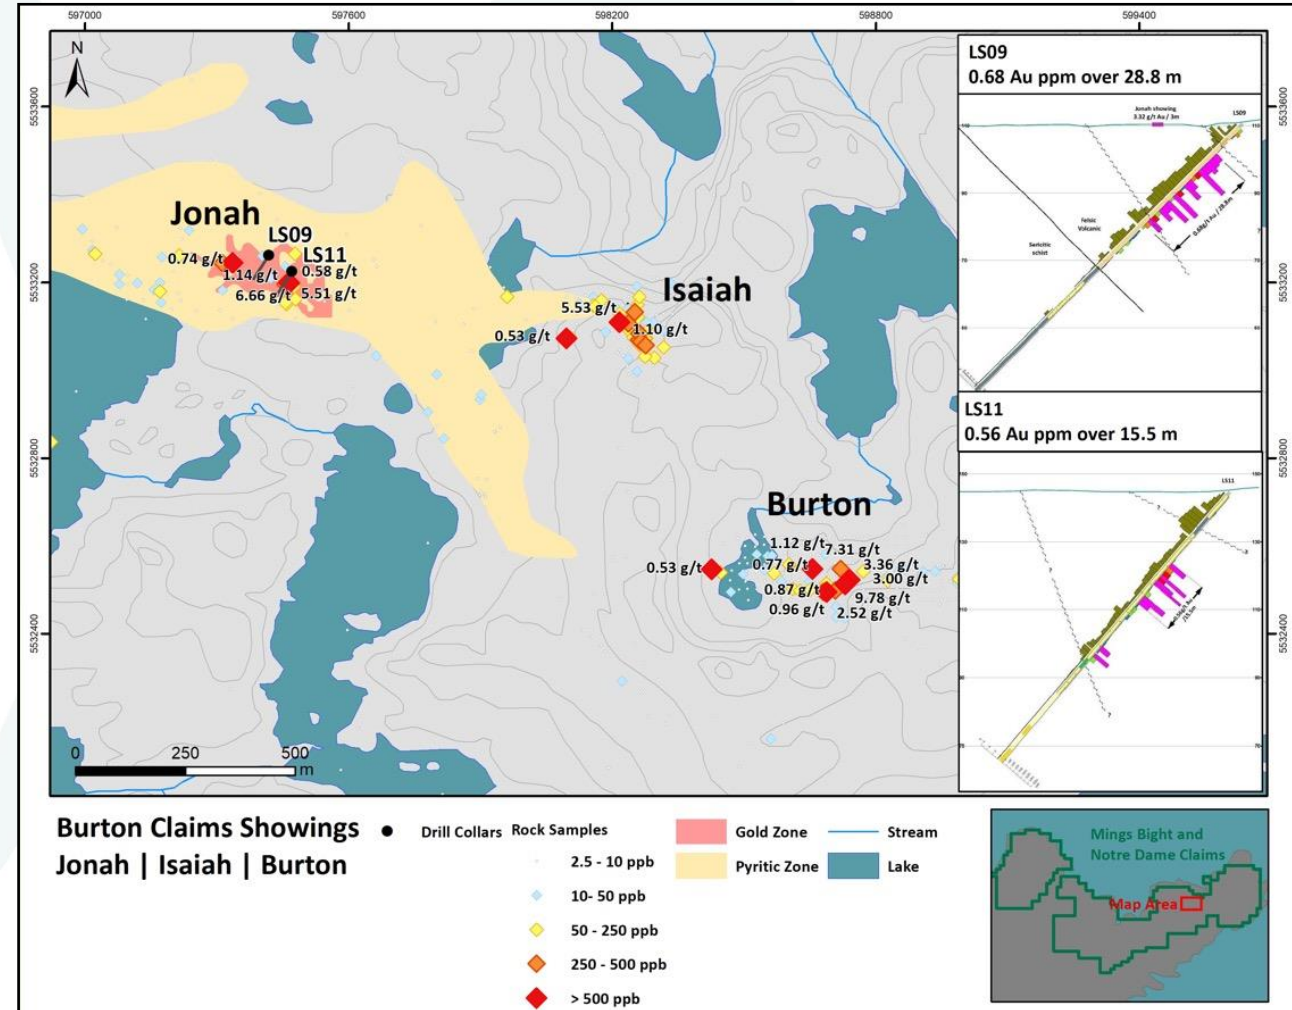

- 18km+ crossing Hope Brook Property
- Several companies successfully drilling Bay D'est Fault for lithium
- Australian based Piedmont Lithium to acquire 70% interest in Sokoman/Benton Golden Hope Lithium Project
- BDF to be included in 2023 exploration program.

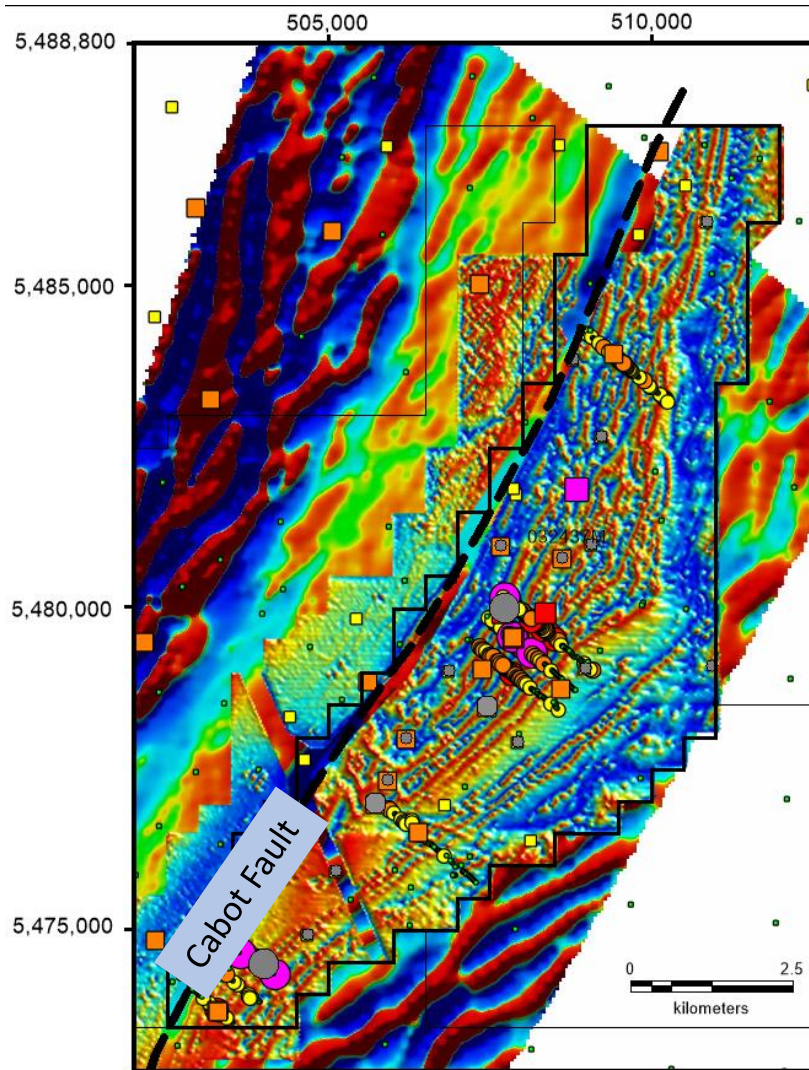

Other Exploration Assets

Gold Island, Burton Property

- The Burton prospects consist of three epithermal gold occurrences.
- Sampling highlights include rock chips assaying up to **56 g/t Au** at the Burton prospect.
- Historic drilling at Jonah prospect returned **28.8 m of 0.68 g/t Au**.
- Highly prospective area close to La Scie.
- Additional core drilling here is recommended for next exploration program.

Gold Island, Hampden Property

Government mag., drone mag., soil & till geochem.

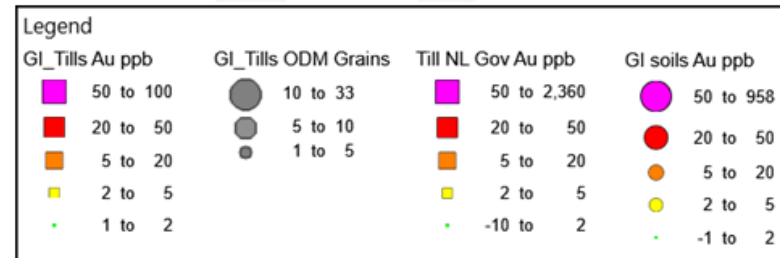

First order crustal scale Cabot Fault strikes N-NE along the western boundary of the main claim block.

Four target areas were defined from gold in soil samples from 2021 exploration and follow up till sampling in 2022.

The tills samples observed several **pristine gold grains coincident with the soil anomalies.**

Drone magnetics in 2023 identified second order structures off the Cabot Fault **refining target locations.**

Next steps are detailed prospecting, trenching and exploration drilling.
